Source: INE/DREM - Health Statistics

Notes:

(a) From 2010 onwards, the number of hospitals fully corresponds to the counting of active hospitals, the statistical concept (local unit) being fully implemented

(b) With the creation of the Health Centers Group (ACES) of the Autonomous Region of Madeira (ARM) in 2016 (Ordinance No. 124/2016 of 31 March), a new organisational structure for the primary health care of the ARM was established with 7 official clinics, comprising 48 functional units (aggregation of 15 official clinics and 33 peripheral units, existing in 2015).

(c) 2008-2010: Revised figures according to the Final Estimates of the Resident Population series for 2001-2010. For 2011-2018, the Provisional Estimates of Resident Population (which incorporate final results of the 2011 Census) were used.

(d) The physicians are counted as many times as the number of medical specialties he/she is practicing.

x - Value not available

Po - Provisional value

± - Series break
